

MobGift

Configurable mob drops and surprise loot for Minecraft servers

MobGift is a lightweight Minecraft plugin that adds configurable bonus drops to mobs. It is designed for Paper and Spigot servers and gives server owners an easy way to create custom loot rewards without modifying source code.

Server Paper / Spigot	Minecraft 1.21	Java 21	Install Direct .jar
--------------------------	-------------------	------------	------------------------

What Is MobGift?

MobGift allows mobs to drop extra items based on a simple configuration file. It can be used for bonus drops, rare rewards, custom loot chances, different drops per mob, and server-specific reward systems.

Main Features

- Easy direct .jar installation
- No Maven, Kotlin, or source code required
- Supports Paper and Spigot servers
- Configurable mob drops and adjustable drop chances
- Option to keep or replace vanilla drops
- Supports specific mobs or all mobs
- Kotlin runtime bundled inside the plugin JAR

Simple Installation

Copy the MobGift plugin file into your server's plugins/ folder, then restart the server.

```
mobgift-1.0-SNAPSHOT.jar
```

Generated config:

Default Behavior

The default configuration is safe for normal survival servers. By default, MobGift:

- keeps vanilla mob drops;
- adds small bonus drops;
- avoids high-value rewards like diamonds;
- only applies bonus drops when a mob is killed by a player.

Configuration Example

MobGift uses a simple YAML configuration system.

```
drops:
  replace-default-drops: false
  items:
    creeper_gunpowder:
      material: GUNPOWDER
      amount: 1
      chance: 0.25
      mobs:
        - CREEPER
```

This means that Creepers have a 25% chance to drop 1 extra Gunpowder.

Keep Or Replace Vanilla Drops

Recommended setting:

```
replace-default-drops: false
```

This keeps normal Minecraft drops and adds MobGift drops as bonuses. Advanced setting:

```
replace-default-drops: true
```

This removes vanilla drops and allows MobGift to fully control mob loot.

Custom Drop Chances

Drop chances use values between 0.0 and 1.0.

```
0.05 = 5%
0.10 = 10%
0.25 = 25%
0.50 = 50%
1.00 = 100%
```

Mob Support

You can target specific mobs or apply a drop to every mob.

```
mobs:
  - ZOMBIE
  - SKELETON
  - CREEPER

# Every mob:
mobs:
  - ALL

# Single-line format:
mobs: ZOMBIE,SKELETON,CREEPER
```

Updating MobGift

- Stop the server.
- Back up plugins/mobgift/config.yml.
- Replace the old MobGift .jar with the new version.
- Start the server.

Your existing configuration will not be overwritten automatically.

Commands And Permissions

MobGift currently does not add commands or permissions. All configuration is handled through:

```
plugins/mobgift/config.yml
```

Troubleshooting

Plugin does not load

- Make sure the .jar file is inside the plugins/ folder.
- Make sure the server is running Java 21.
- Make sure the server is compatible with Minecraft API 1.21.
- Check the console for startup errors.

Drops do not appear

- Make sure the mob was killed by a player.
- Check that chance is not 0.0.
- Check that the mob name is valid.
- Check that the material name is valid.
- Restart the server after editing the config.

Perfect For

MobGift is useful for survival servers, RPG servers, event servers, economy servers, custom reward systems, and lightweight loot customization.

Summary

MobGift is a simple and configurable mob drop plugin for Minecraft servers. It gives server owners an easy way to add bonus loot, rare rewards, and custom mob drops while keeping installation and configuration beginner-friendly.
